Project Set-up
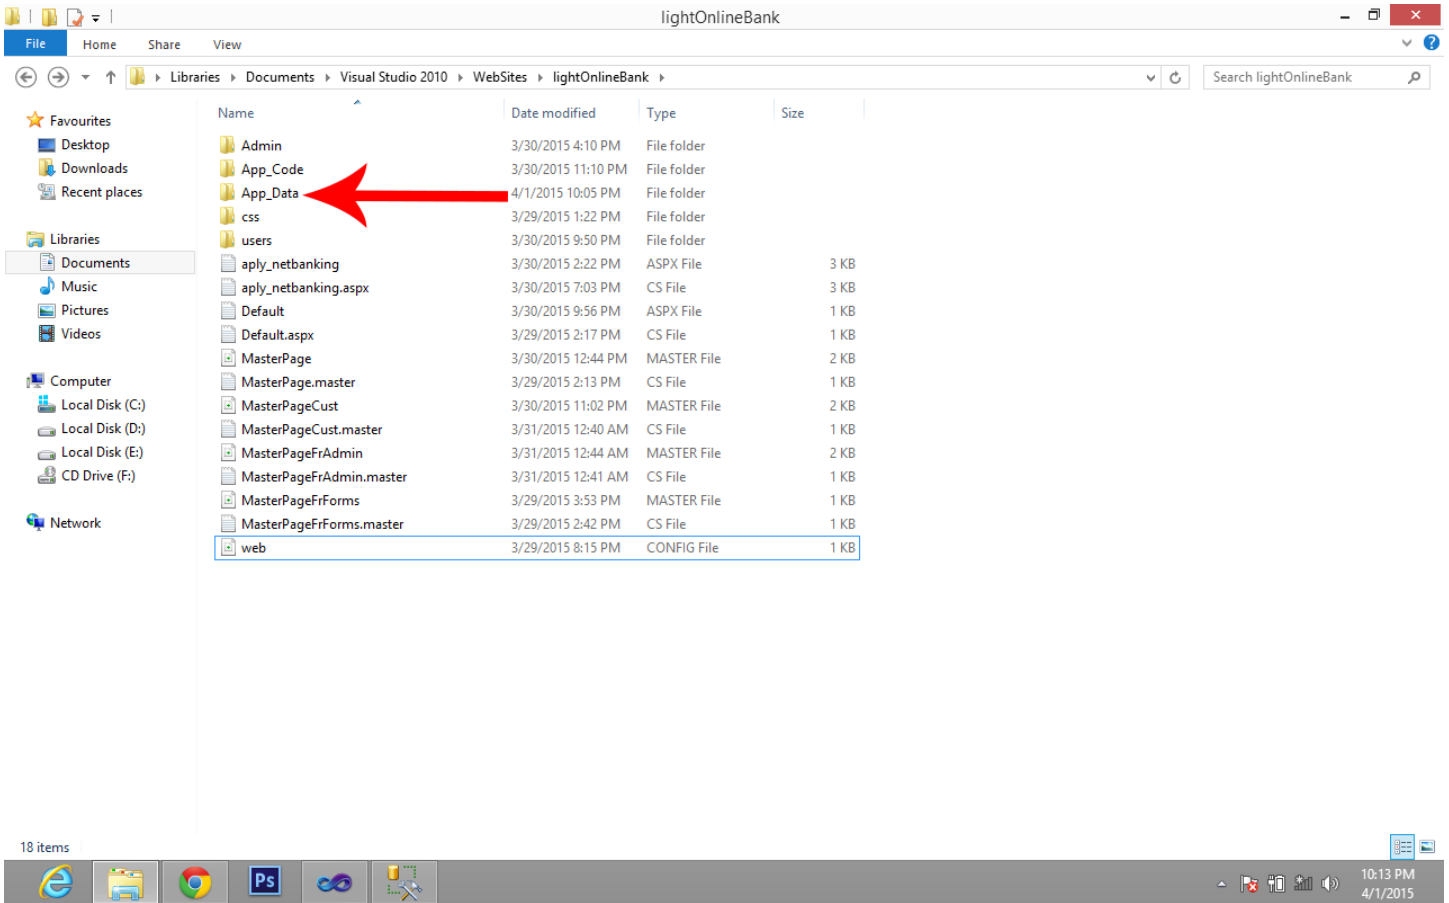

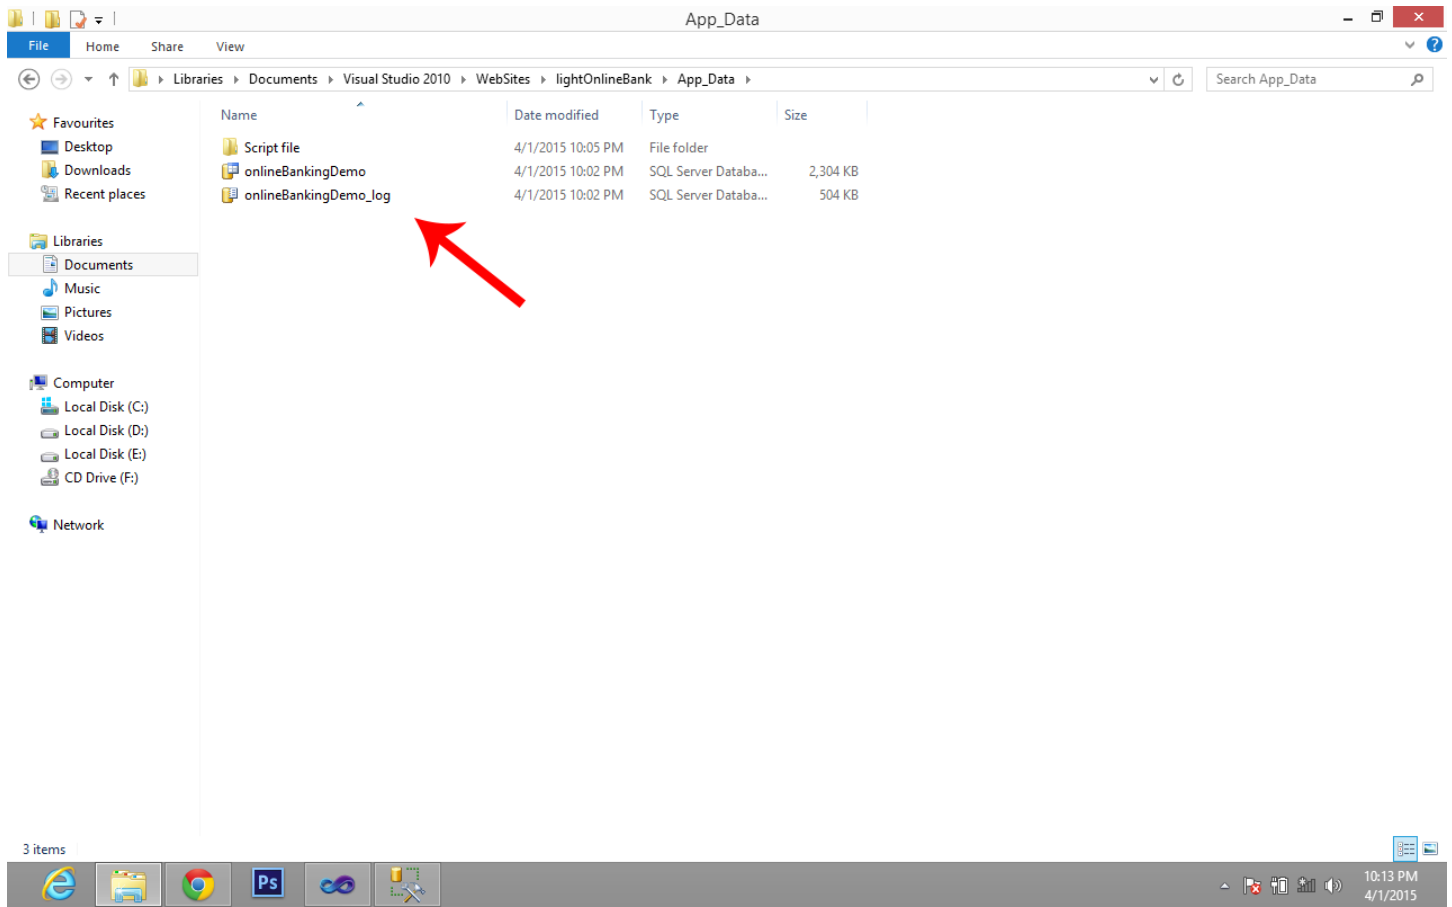

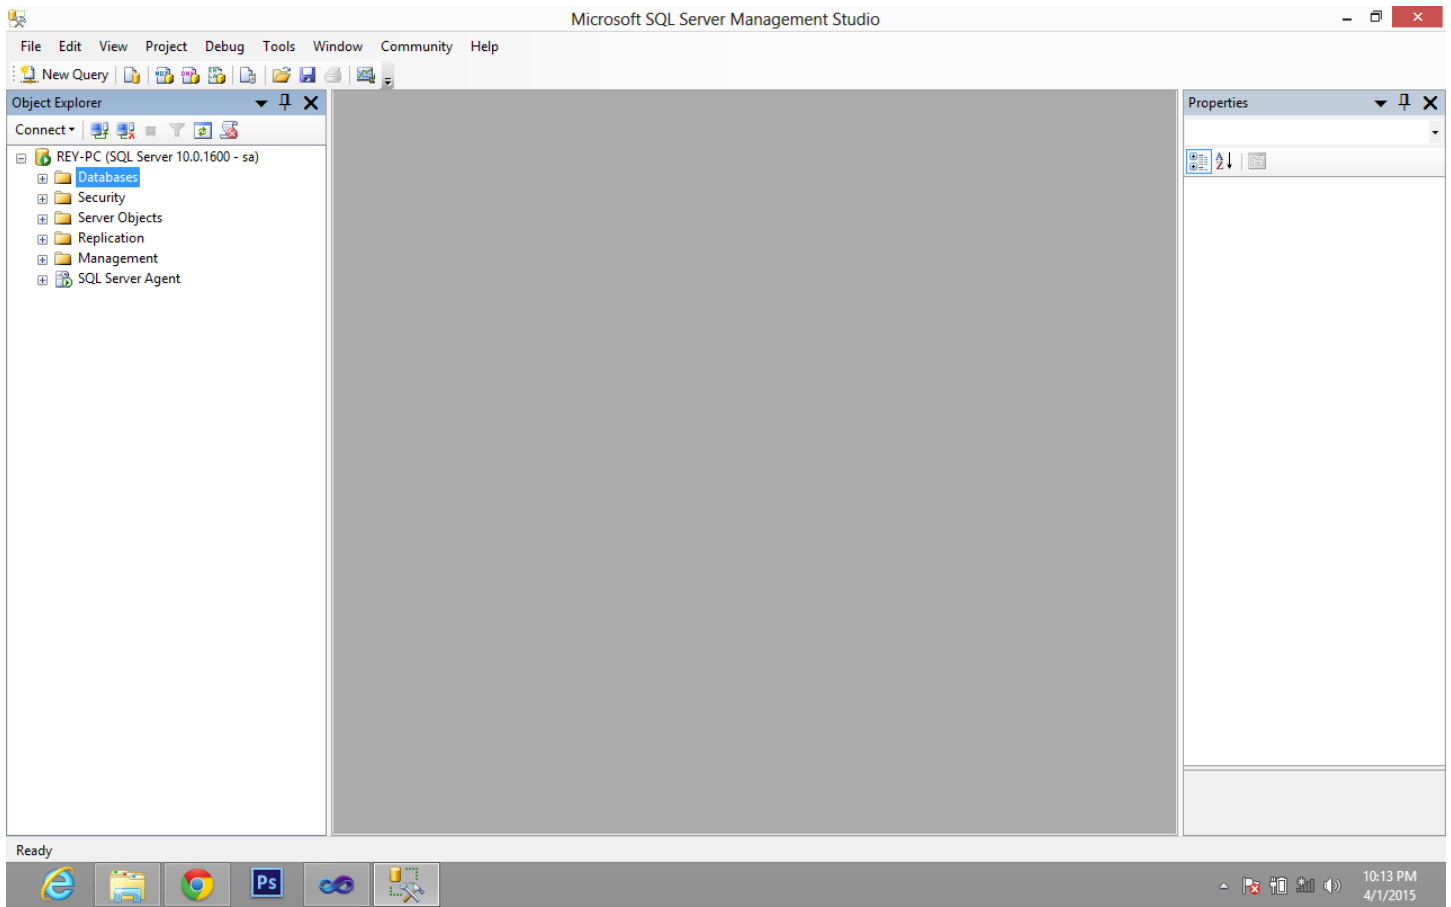

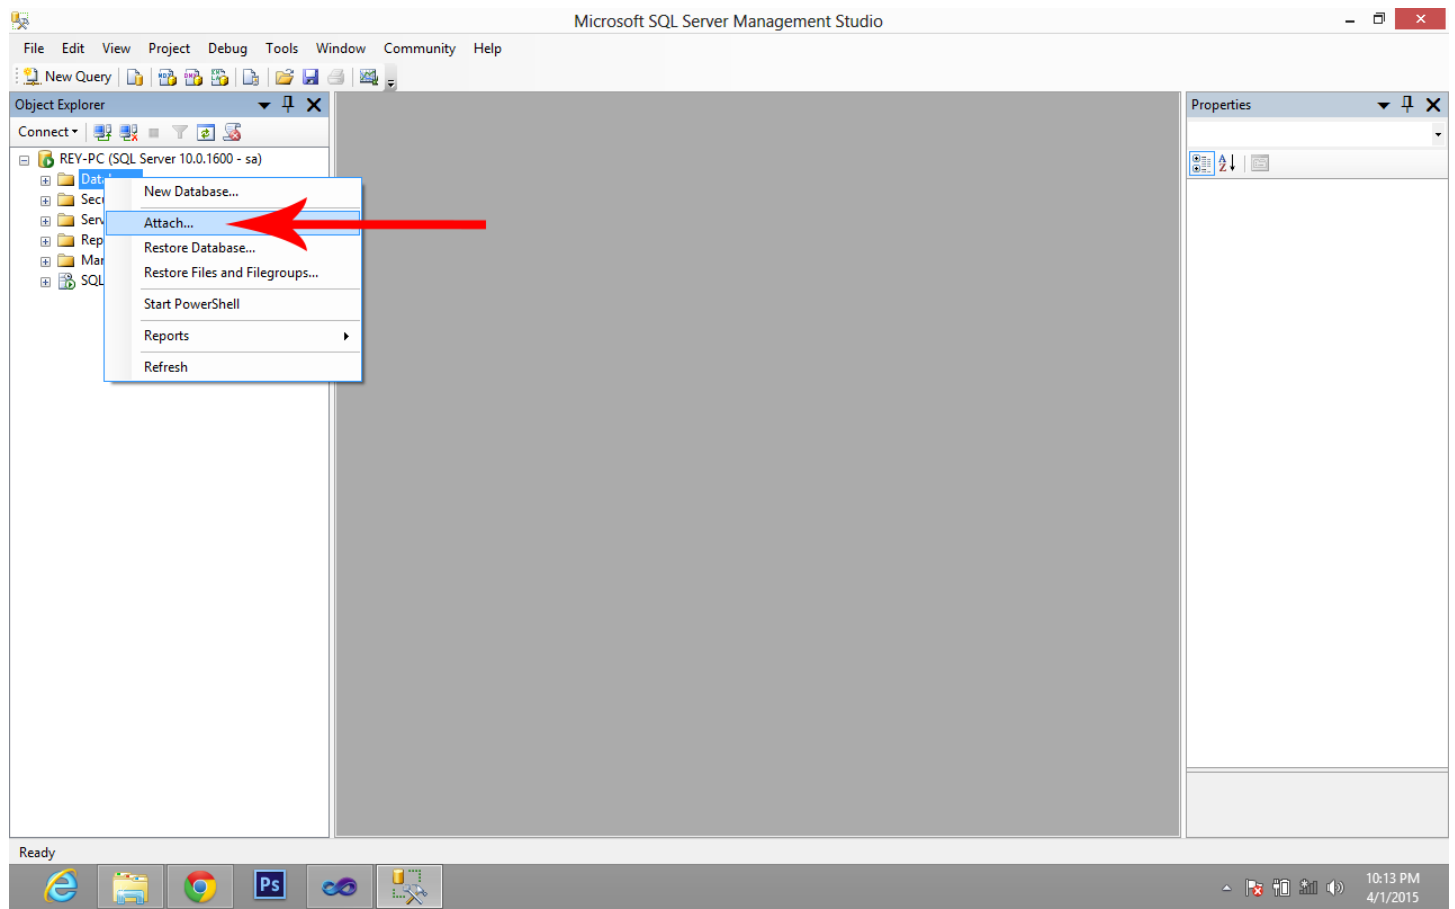

1. **Database Setup**
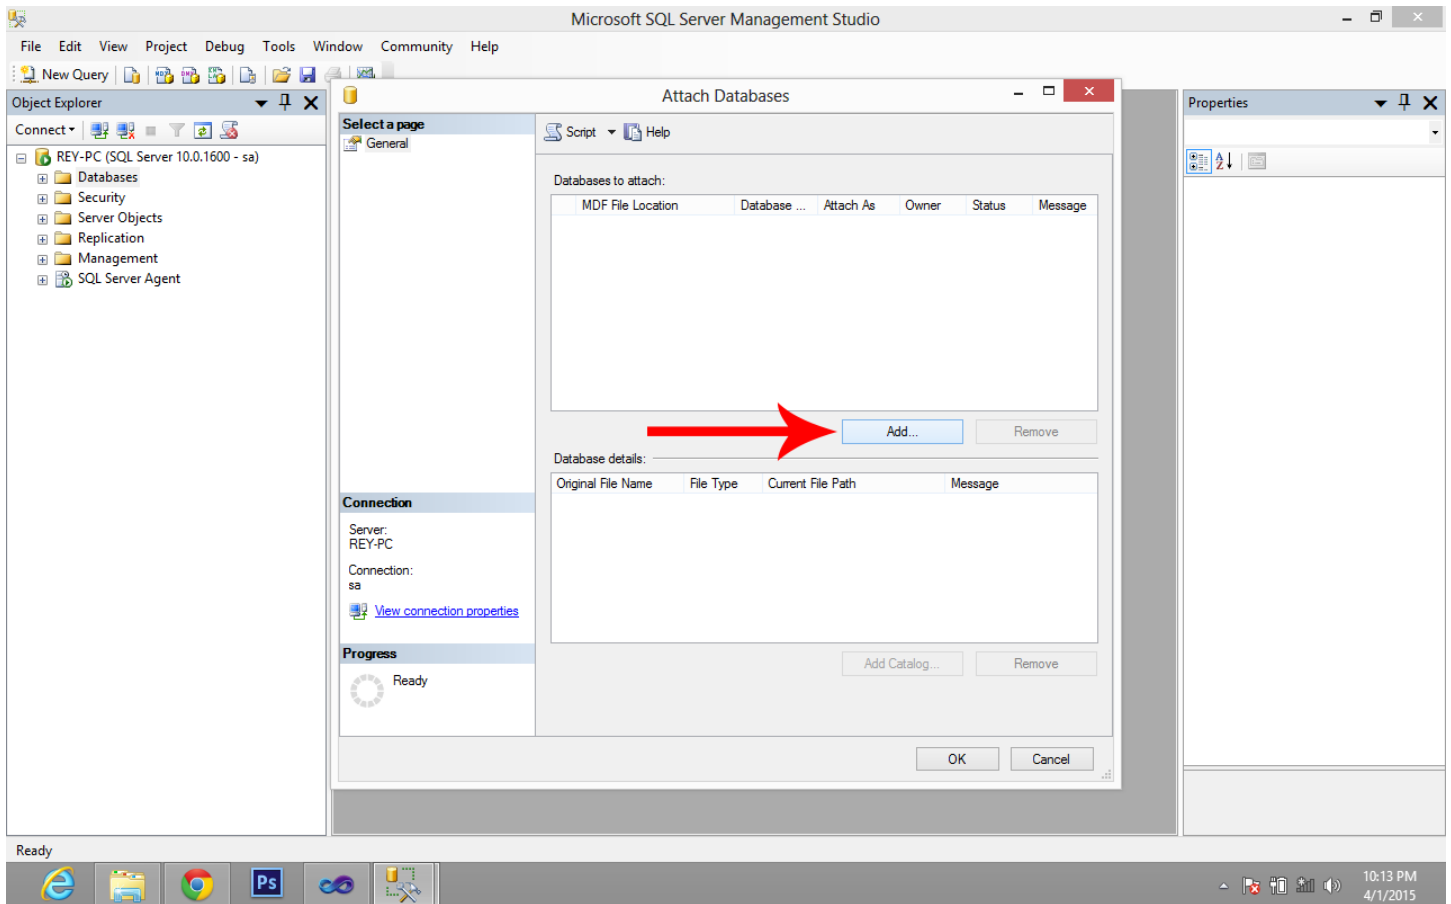

Add database file to SQL Server 2008

Open SQL Server and right click on Databases Folder.
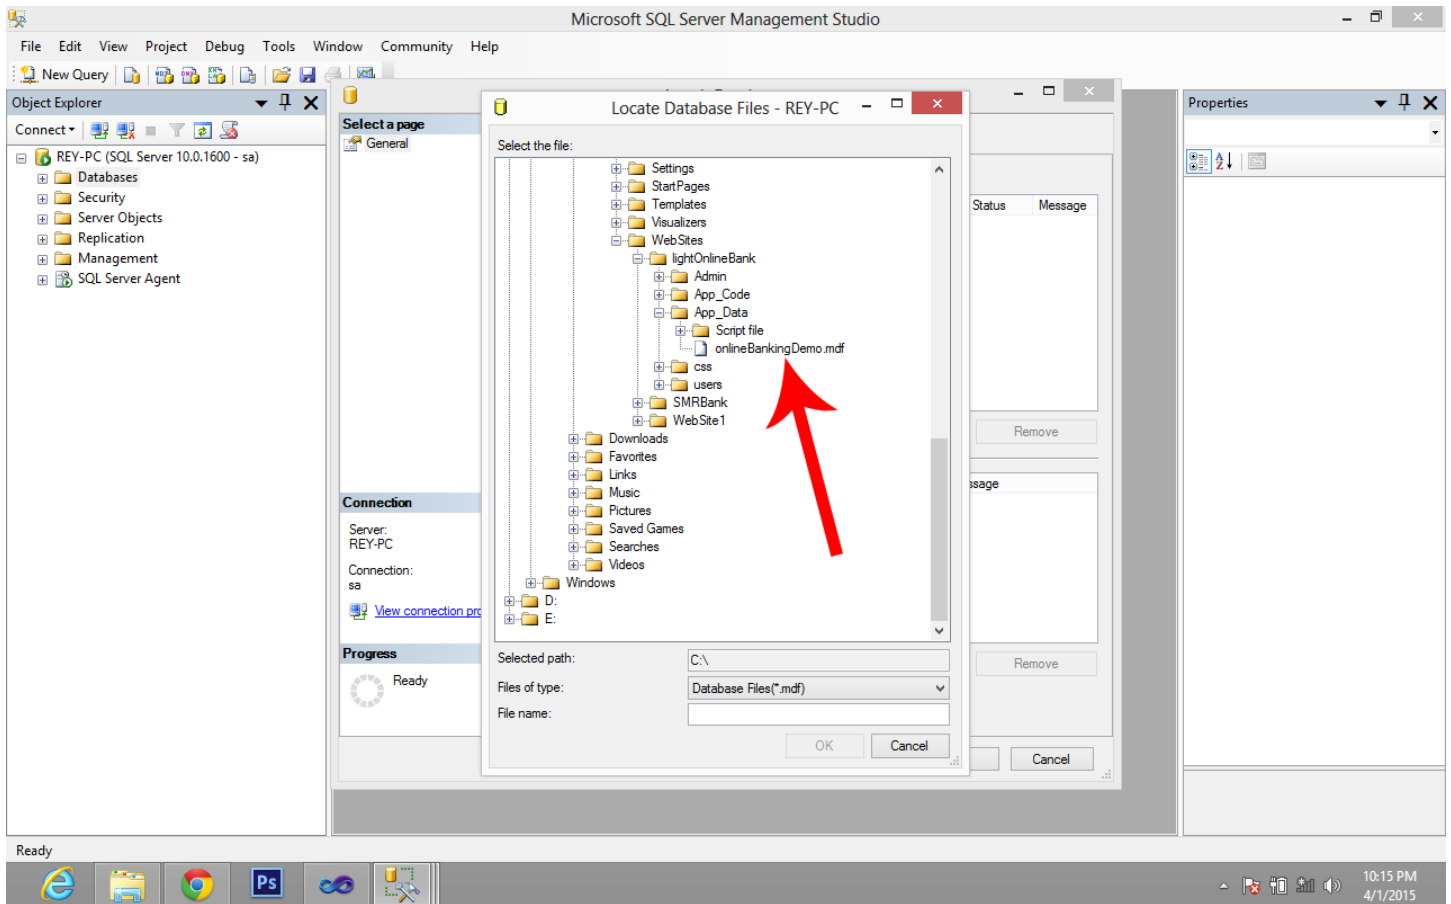

Click on Attach then attach file.

Click on Add.

Find project file.

Select .mdf file then click on OK.

Click on OK.

Your database is added.
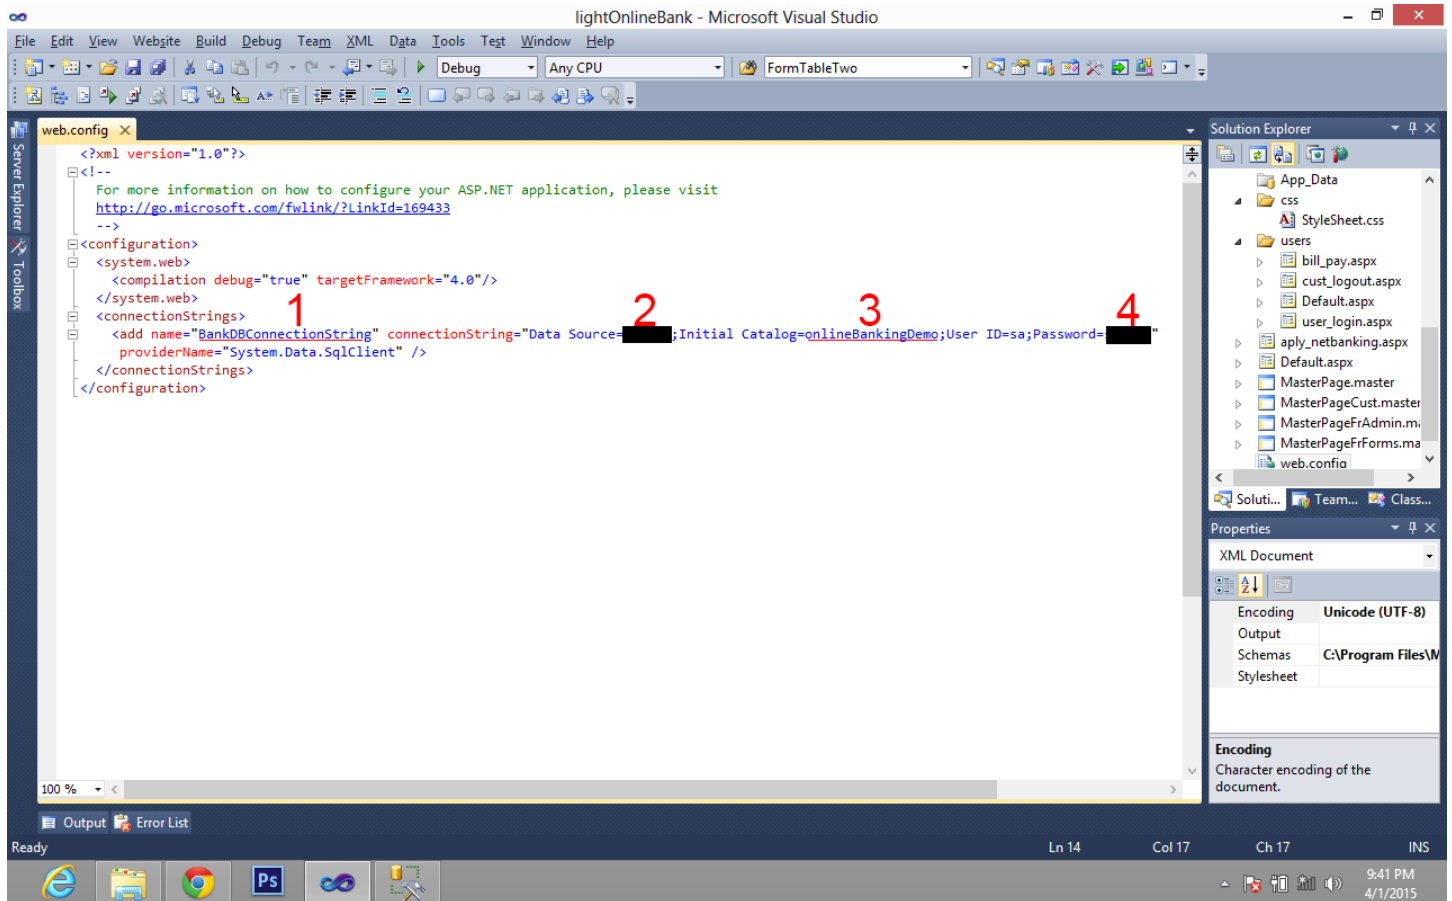

2. Visual Studio Setup

In web.config file Add ConnectString.

1 > Name = Anything you want, but now (Don't change it).

2 > Data Source = Your PC name.

3 > Catalog = Your Database name.

4 > Password = SQL Server Password.

Done

May this tips help you!
